COURTSPOrts INC. - COMPANY PROFILE

Courtsports provides professional wood flooring services in the areas of commercial, institutional and athletic facilities, maintaining a tradition of excellence based upon consistent delivery of speed, economy, and quality. Since beginning in Portland, Oregon, nearly 10 years ago, Courtsports has performed work across the entire Pacific Northwest and Northern California.

From the start Courtsports has realized the value and vitality involved in servicing their customers needs. So it has been difficult performing work outside the Pacific Northwest. The next step for Courtsports involves setting up and establishing regional offices in specific cities across the United States. Each office will function as an independent business united by a central corporate vision. Courtsports has established local connections with key businesses and the community at large, coupled with the resource strength of a national firm.

"I am excited about the future and growth into other communities. And we will continue the tradition of providing our customers with the finest craftsmanship and emphasizing building partnerships and long-term relationships with our clients. We look forward to carrying these traditions on to the next generation of Courtsports."

Erik Sigurdson - President & Founder of Courtsports Inc.

Portland Trail Blazers - Rose Garden Arena

WOOD FLOOR SANDING

Unlike any other flooring surface, most wood floors can be restored to look brand new again. Courtsports can sand your existing wood floor using state-of-the-art floor sanding equipment. Courtsports is much more efficient than its competitors because they use large riding sander machines for the larger court floors. With a riding sander machine they can sand most gym floors in as little as one day! This includes three complete passes using 36 grit, 60 grit, and 100 grit.

For the smaller floors Courtsports uses Kunzle and Tansin (KT) drum sanding equipment which are manufactured in Italy. The KT sanders are precision machines perfect for aerobic studios, racquetball courts, and dance floors.

After the final sanding step has been completed Courtsports provides an additional fine screening that is typically not completed by other wood flooring contractors. By using a heavy duty floor machine equipped with 120 grit screens the entire floor is lightly screened until it is perfectly smooth. This process blends the edges around the walls into the main field of the floor. It also tightens up the wood grain so it accepts a better first seal coat. This will achieve a lighter colored wood floor when using oil-modified or waterborne seal coats.

SCREEN & RECOAT MAINTENANCE

Most wood floors can be restored by a screen and recoat process. This process is the most inexpensive way to bring back your floors original shine and most importantly build up a protective layer of finish. However, this process will not remove any dents, dings, or damage that has occurred to your wood floor. And it is not recommended if your existing finish is peeling or flaking in certain areas (a floor should be completely sanded in this case). Most gym floors can be screened and recoated over a two day period and will be available to play on after 72 hours of dry time.

Courtsports strongly recommend that all newly installed and resurfaced wood floors to be screened and recoated after the first year. After a new install or sanded gym floor service has been completed It's important to build up several layers of gym finish to protect the wood and the game lines from being damaged. A typical gym floor with normal foot traffic will wear through one layer of finish each year. Basketball court keys, racquetball service areas, and aerobic room exercise high traffic areas tend to wear much more quickly. In these areas it is normal to wear through two layers of finish in a one year span.

For most gym floors Courtsports uses what is called a wet screening method when abrading an existing gym finish. Most competitive flooring contractors use a dry screening method (this method is much faster and cost effective for the contractor). Courtsports wet screens for two simple reasons: wet screening cleans the floor much better and it doesn't allow the screening dust to go airborne.

When a gym floor is dry screened it abrades the old gym finish the same as wet screening. But what dry screening does not do is clean the floor. Courtsports uses a neutral cleaner (typically Hillyard Super Shine All) mixed with warm water during the wet the screening process. This extra step will remove pop spills, sweat, and dirt from your floors surface more effectively. The overall appearance will be a brighter and cleaner floor.

GAME LINES AND CUSTOM GYM FLOOR GRAPHICS

There's nothing more exciting than a custom painted gym floor by Courtsports. Players and coaches alike enjoy playing on a floor with striking images and vivid graphics. Even the fans get excited about the new look of your gym floor. A newly painted floor by Courtsports can become the talk of the town! Courtsports will help you and your staff design a court floor that you will enjoy playing on and are proud to show off to the visiting teams.

GYM FLOOR INSTALLATIONS

No other sports surface can compare to a floor by Courtsports. You can count on its versatility, resiliency, long lasting beauty, and easy, low cost maintenance year after year. And, because it's a Courtsports floor insures you of unexcelled quality.

Courtsports only uses MFMA approved maple flooring for your sports floor so you can be confident that it will stand up to the roughest games, the toughest abuse, and the most wear. MFMA maple is made to naturally take the knocks of basketball, volleyball, roller-skating, and racquetball - even normal street shoe activities.

Your teams, as well as your maintenance crew, will appreciate the remarkable resiliency of MFMA maple flooring. It's easy on the feet - affords better footing and fewer leg and ankle injuries. The construction and natural "give" of MFMA maple flooring provides a resilient, "live action" underfoot that cannot be matched. And, your maintenance crew will save time and money on day-to-day and month-to-month care because a natural MFMA maple floor is easy to clean and retains a fine appearance.

The truly long lasting beauty of a Courtsports floor can be coupled with its easy, low cost maintenance. The very nature of MFMA maple is a very hard, dense, fine-fibered wood that is non-splintering, long wearing and resilient. The closeness of grain and smoothness of surface affords no lodging place for germ-laden dirt to hide. It is a particularly clean and sanitary floor that will maintain its beauty for years.
